

SHARING CITY & TACTICAL URBANISM

Lack of transparency, long-term planning processes, and limited co-creation are parts of the encountering issues of cities. Consequently, collaboration across sectors, between stakeholders, and engaging citizens in the process plays an increasingly vital role in delivering a sustainable city.

This research proposes ways of reusing the underutilized spaces and provides immediate interactions of citizens, the stakeholders, and the municipality to address the socio-economic and environmental challenges of the city.

How a Smart City can enable and promote citizen participation in a more interactive way?

How to **revitalize** or use them **more properly**? Not only **urban planners** but also **non-skilled citizens**?

How to **reduce** the long **urban planning processes**?

Not only improve **citizens participation** but also **involve** them in the **design process**?

If **Sharing City** and **Tactical Urbanism** are possible solution? And, if yes, **how we use them**?
